

Trinities, Triads, Trios

Michael Snow – Clip 18

Trinities, Triads, Trios is three variations on the same still life arrangement seen, they're holograms, so they're seen in illusory space that's very, very convincing and they are set to look like they are on table legs so that when you confront the hologram part of the three holograms they are of course a vertical plane, but the image is horizontal and that image is set to be over table legs. There's a kind of a fast life involved because one of them is the still life in a naturalistic light and it has a phone and a cup and saucer, a lamp and then the middle one is everything that you've seen in the first one exploded and it's really a terrific hologram because when you look at it you can really look behind, things are floating behind things, and it's all in the air and so it's the phone and all those things are all kind of blown apart in the air and then the third one is the afterlife...they are seen as ghosts, and they're transparent but they're floating above the tabletop, and those are the three things in the triad.
